

AGRICULTURE PRO – SMART FARMING ANALYSIS

DATA AND BUSINESS ANALYSIS WITH AI

TOOLS : EXCEL | POWER BI

DEVASENA S

PROJECT OVERVIEW

PROJECT : Agriculture Pro – Smart Farming Analysis

OBJECTIVE : Analyze agricultural data to identify useful farming insights.

KEY AREAS : Crop, Season, Location, Soil & Irrigation

TOOLS : Excel | Power BI

DATASET OVERVIEW

The dataset contains agricultural data related to:

- Crop Type
- Season
- Location
- Soil Type
- Irrigation
- Temperature
- Rainfall
- Production

AGRICULTURAL DATA ANALYSIS

Analyze agricultural data to identify :

- Crop Performance
- Production Trends
- Irrigation Trends
- Soil and Weather Impact

DASHBOARD OVERVIEW

CROP ANALYSIS

Water Consumption by Crop

Irrigation Type Distribution

Water Usage by Season

Water Usage by Irrigation Type

SOIL AND LOCATION ANALYSIS

CONCLUSION

- The dashboard provides useful insights into agricultural data.
- It helps analyze crop production, irrigation, soil, and weather patterns.
- Power BI makes the data easy to understand through interactive visualizations.
- These insights can support better decision-making in smart farming.

THANK YOU
